Accu-Tab® chlorinators are made of rigid PVC with several standard sizes available for a wide array of municipal and industrial applications. Axiall has an Accu-Tab chlorinator for nearly every requirement — from less than a pound a day to a few hundred pounds a day. The Accu-Tab system combines uniquely designed, patented chlorinators with slow release 68% calcium hypochlorite to provide one complete system for tablet chlorination.

How the Accu-Tab® System Works

The Accu-Tab® system is easy to install and can be integrated into any existing system with low capital investment. Once in place, the system runs simply and efficiently with little to no maintenance.

1. Accu-Tab three-inch tablets sit on top of a sieve plate inside the chlorinator.
2. Water flows into the chlorinator through the flow meter.
3. Untreated water rises through holes in the sieve plate contacting with bottom of tablets. The balance of the tablets remain dry.
4. Chlorinated water falls to the bottom solution tank.
5. Chlorinated water is returned to the main system by the pump.
6. Chlorine is adjusted with the chlorinator control valve.

2000 Series Model P Options

- Weigh scale and low tablet alarm
- Electrical voltage options
  - 110V 1PH
  - 220V 1PH
  - 230V 3PH
  - 460V 3PH

Series 2000 Controller Features

- Uses 4-20mA signal from customer’s chlorine analyzer® to deliver consistent chlorine residual readings
- Offers chlorine delivery control at a fraction of the cost of other systems
- Provides residual control, flow-pacing and compound loop capability
- User interface similar to the PowerPro™ chlorination system
- Comes with standard warranty
- Available either pre-assembled with chlorinator or installed aftermarket

*3rd party supplier or customer provided
